

get Cipt

Group photo sharing reimagined.

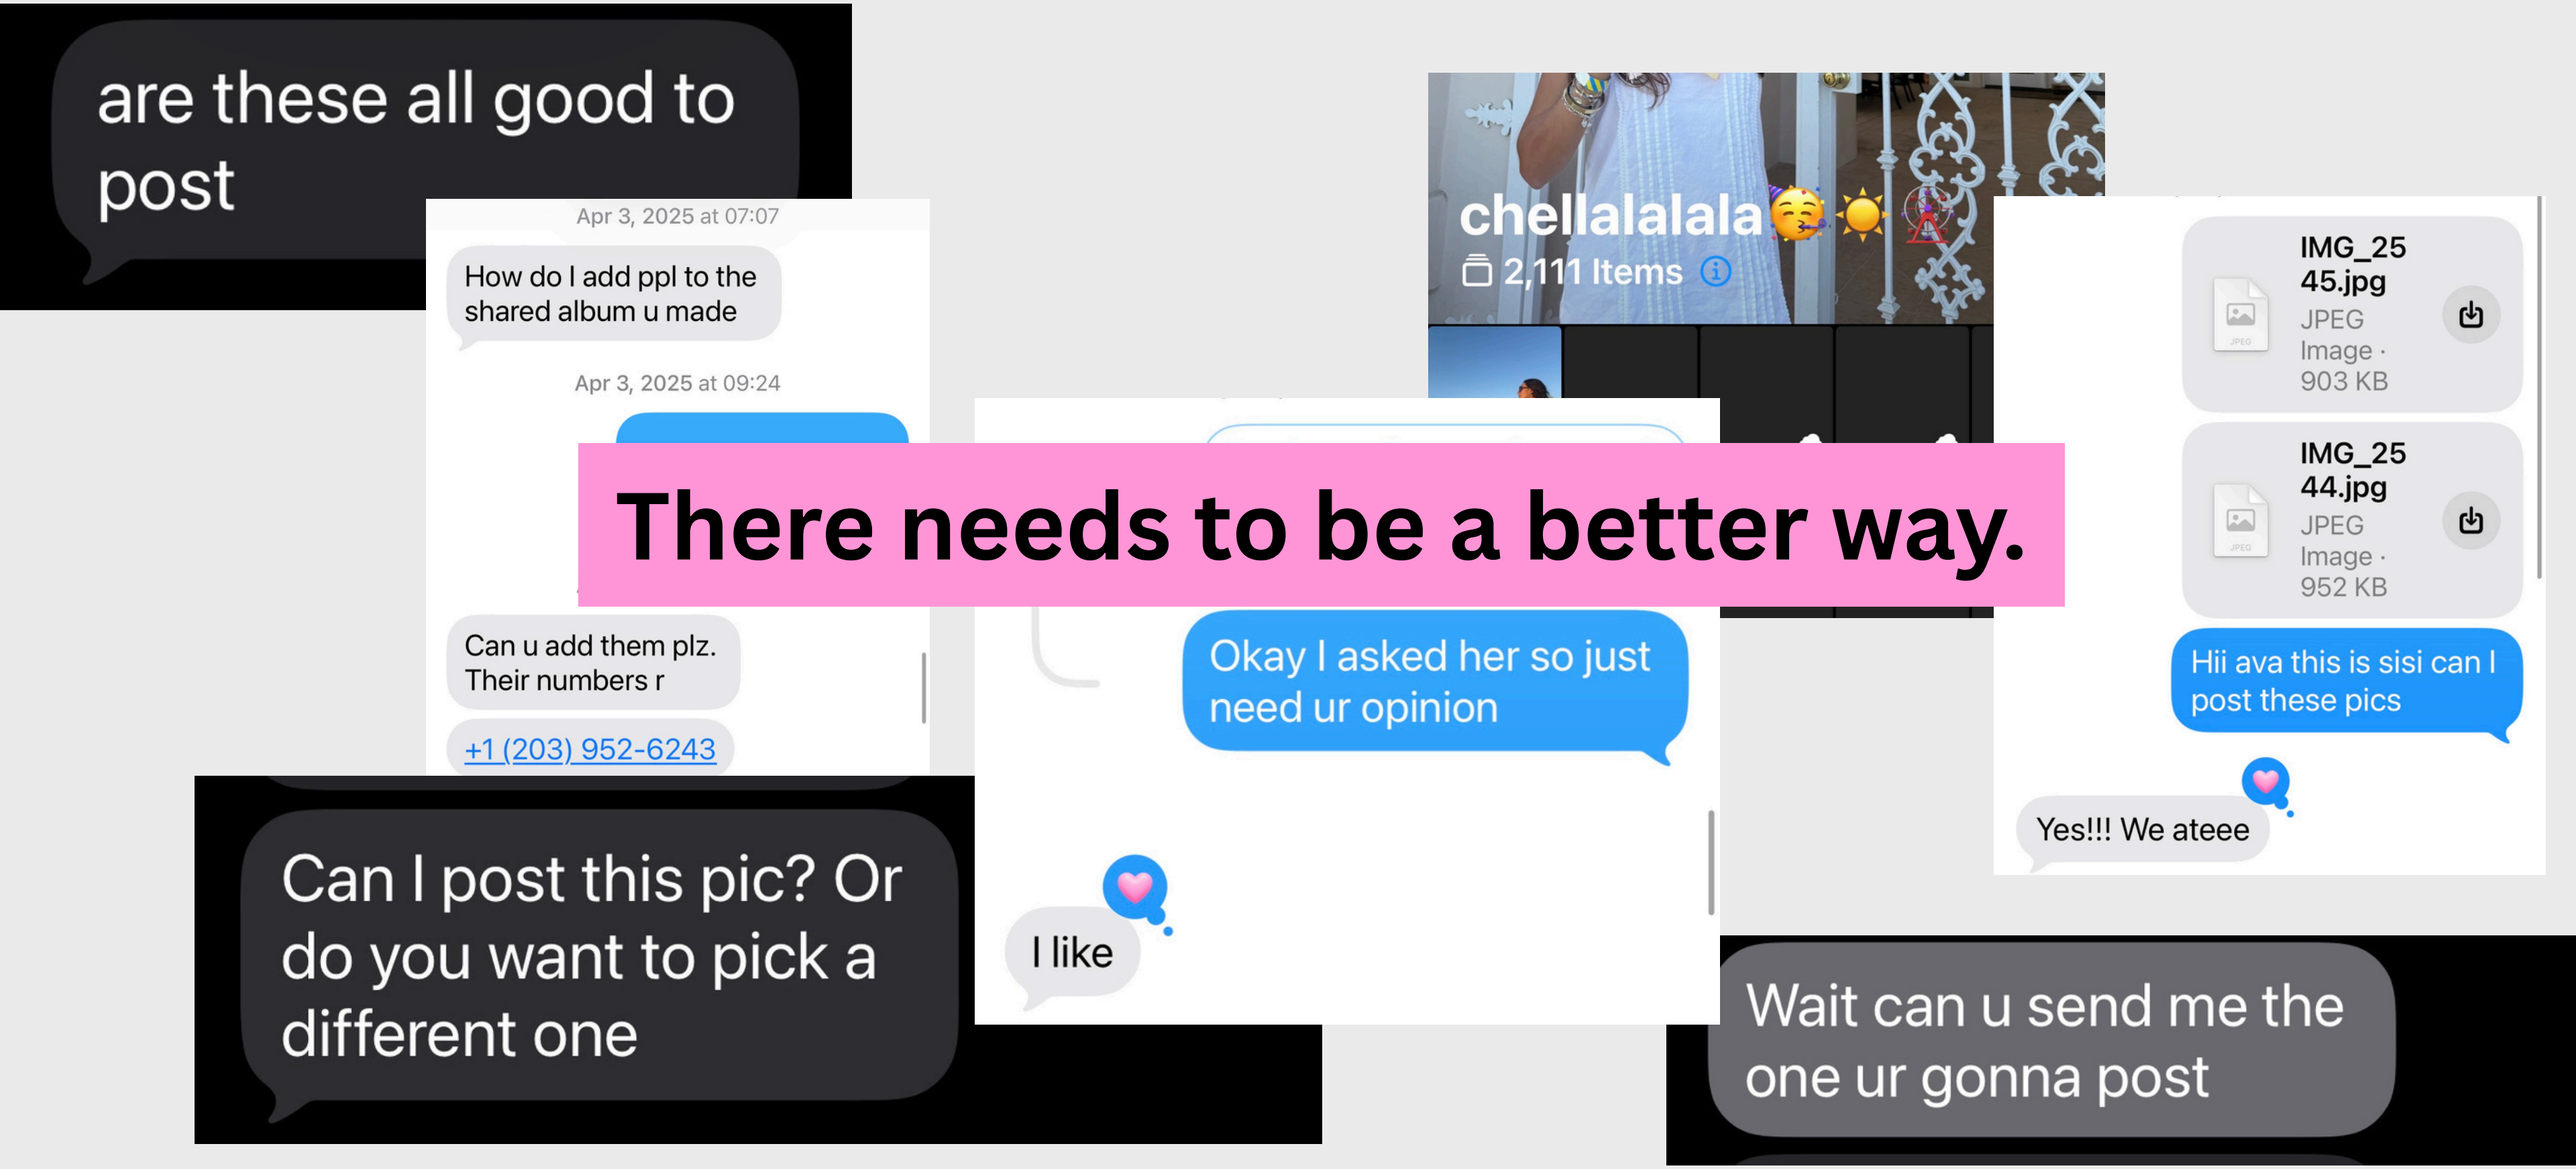

Sienna Signorello and Almir Hajdarevic

Group photo sharing is broken.

- Apple albums exclude non-iPhone users
- Users scroll through 1000+ photos to find themselves
- Photos are manually saved + sent in group chats to see which are unanimously liked
- Approval by friends to post is messy and unclear

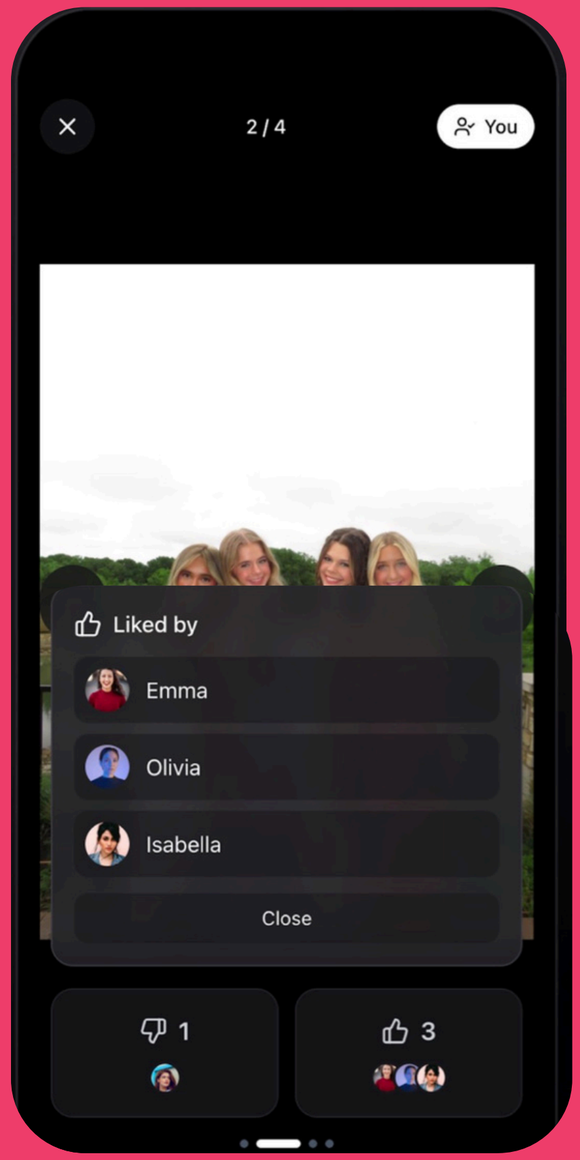

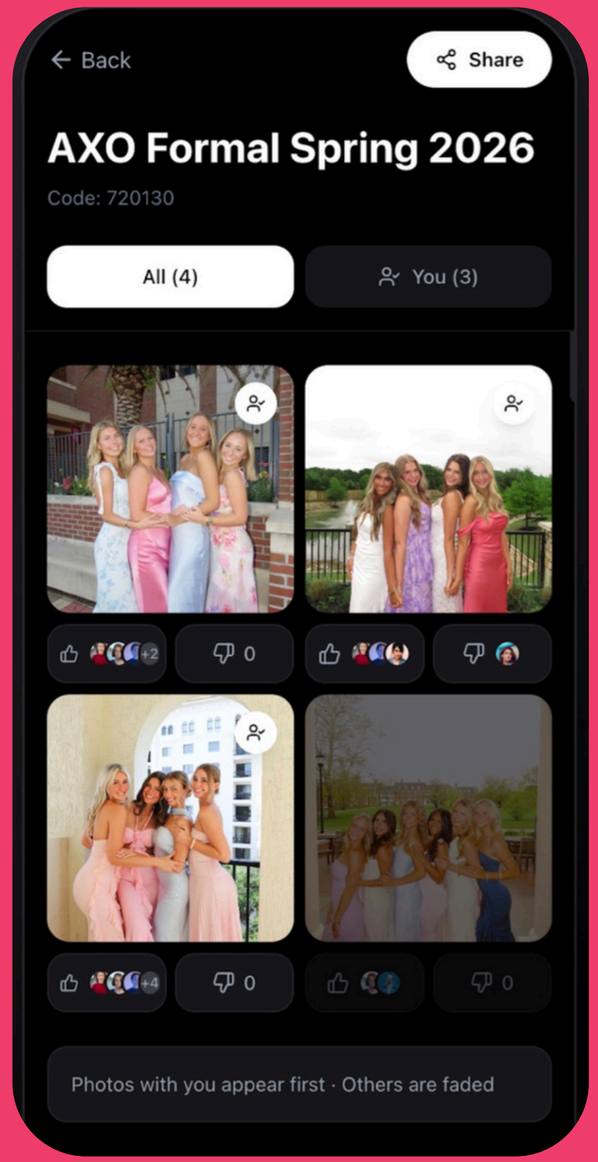

There needs to be a better way.

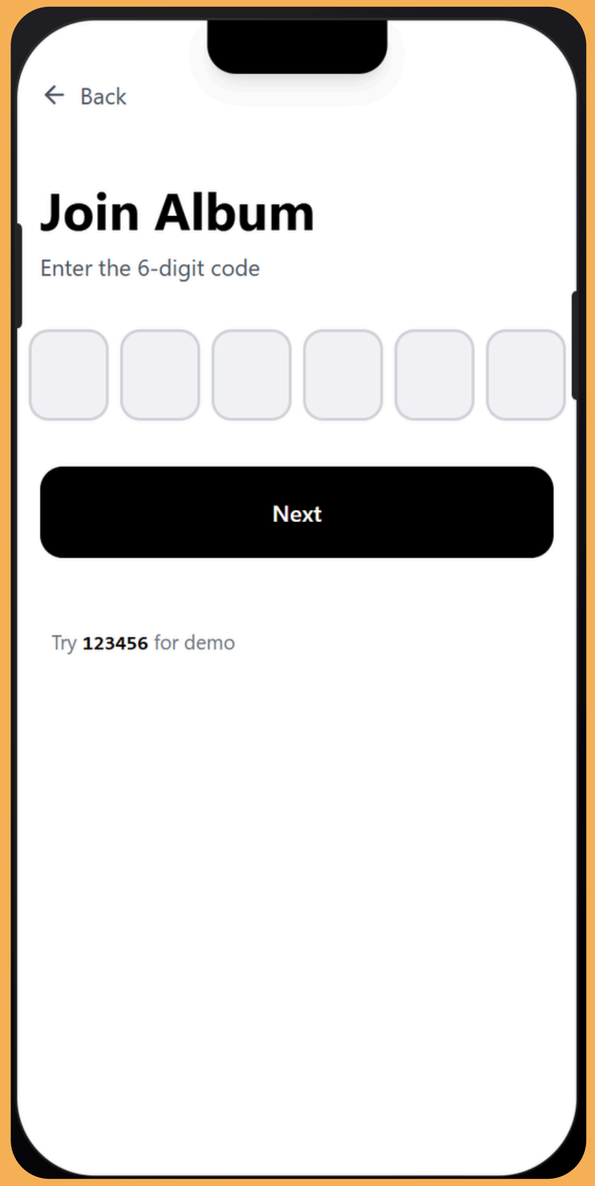

Meet CIPT

CIPT completely innovates photo sharing by automatically filtering out the photos you do not appear in, and having a like/dislike feature so that everyone knows what is and is not good to post, removing the hassle of texts.

By ensuring the groups' opinion of each photo is known, social friction and frustration of things being posted or people not responding to texts is eliminated.

How to join

Joining an Apple Shared Album requires the creator to add each user by phone number. Other platforms like Google Photos allow you to join by link. We believe this overcomplicates the process especially for large groups.

This is why albums on CIPT would be joined with a 6 digit code. If there's multiple friend groups or mutual friends at the event, all they need is someone to tell them the code and can now easily join the album unlike competitors.

Customer Value

- Saves time and effort
- Reduces anxiety about posting photos
- Eliminates social friction
- Faster decision-making and posting after events
- Creates a seamless, personalised experience

Target Market & Segmentation

Primary Market:

- College-aged and young adult women (18-25)
- Socially active, especially in greek life

Secondary Market:

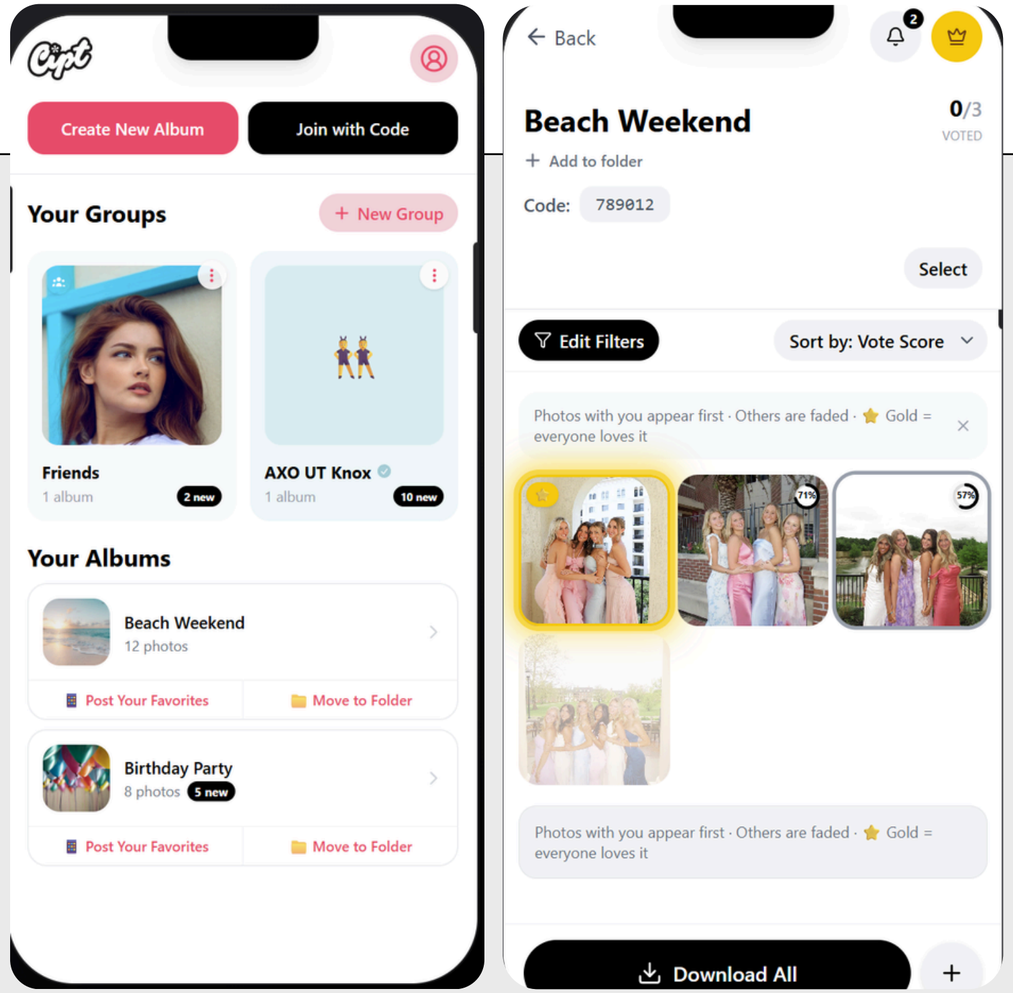

- Event organisers
- Photographers (such as wedding)

Demographic: women ages 18-25

Psychographic: image-conscious, socially active

Behavioural: Frequent photo sharing + posting

Key Insight: Repeated frustration with current systems

Positioning Statement

- CIPT is a photo-sharing app for socially active users
- Automatically surfaces relevant photos
- Adds structured approval for posting
- Unlike current competitors, it removes hassle, excess effort, and uncertainty

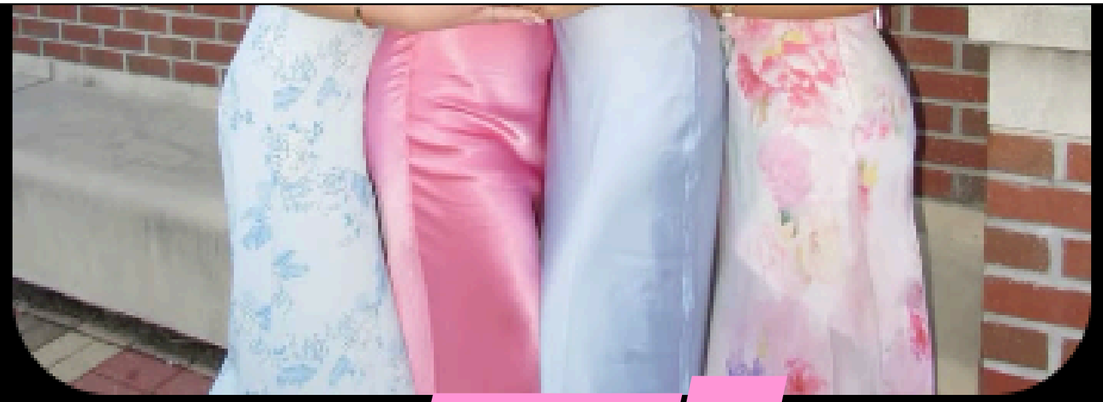

Promotion Strategy

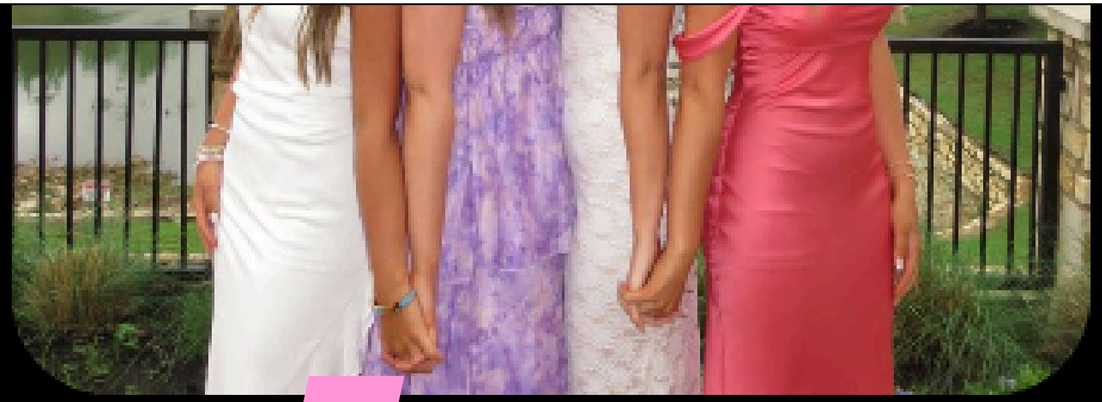

Core Message:
Never ask again “Can I Post This?”

Pop-up matcha events at sororities

- Branded cups
- Users experience app in real time
- Follow up videos from creators
- Focus on real user experience

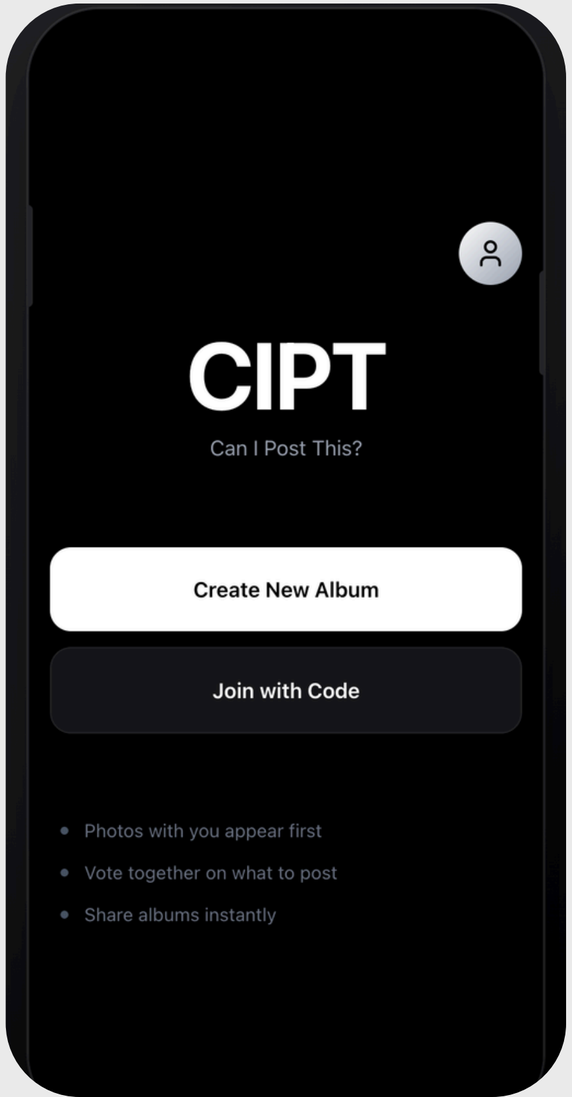

Thank You

Conclusion

- Current photo sharing is a fragmented and frustrating process
- CIPT replaces the entire workflow
- Faster, easier, and more social
- Never again ask “Can I Post This?”

Why it Will Work

- Solves a frequent, high-friction problem
- Highly targeted niche market
- Strong network effects within social groups
- Build for speed, relevance, and social approval

Pricing Model

Freemium model

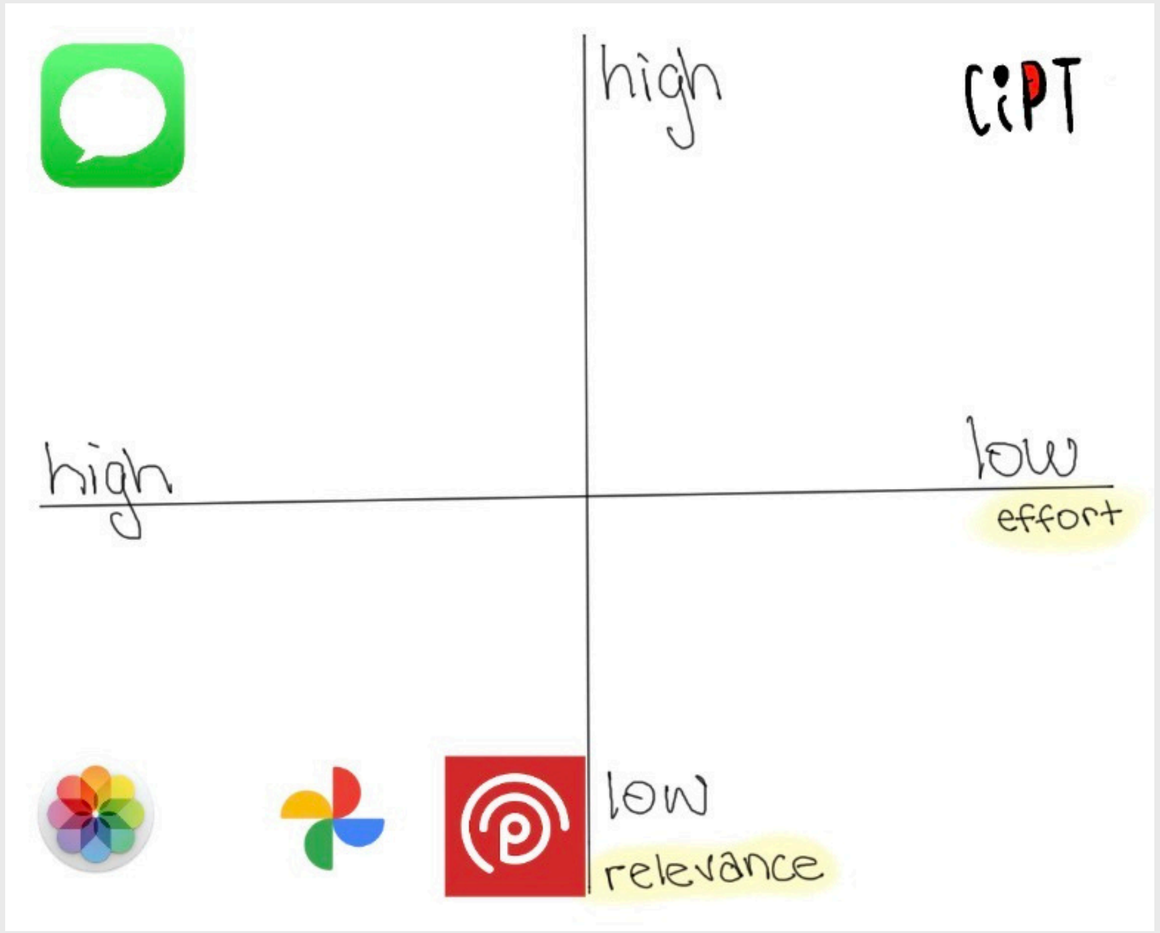

- Album access, voting, saving

Premium($4 a month)

- Background downloads
- Post directly from app with filters on the app

Strategy

- Low barrier → mass adoption
- Monetise heavy users
